## **UNIVERSAL WINDOW SEAL**

- Universal window seal for portable air conditioner.
- It locks the hose from your air conditioner between the window and window frame, creating a barrier around the open window, preventing hot air from entering in the room and leaving out insects, mosquitoes and rain.

- It creates a "closed environment" that keeps your room cool for longer and reduces energy consumption.
- Easy to install and to remove. No tools required. Simply apply the adhesive hook tape to the inside of your window frame and to the window itself. Attach the window seal to the hook tape and place your air conditioner hose out of the window using the zip to lock it.
- Seal for perimeter windows greater than 270 cm and less than 390 cm.
- Suitable for windows with one or two hinged doors that open inwards or outwards. Also suitable for skylights.
- Material: 100% polyester, country of origin: China.
