Description of Appliance

The following terms are used throughout the instruction manual

Wall Mounting Installation

Fig. 1

Fig. 2

Thank you for choosing this De'Longhi appliance. To get the best results from your new heater please read these instructions carefully before use. This should ensure optimum results and maximum safety.

SAFETY WARNINGS

- The first time you use the appliance, operate it for at least 15 minutes with the thermostat at maximum to eliminate the "new" smell. A little smoke due to the protective substances applied to the heating element before transport may be given off. This is completely normal and not a cause for concern.
- Do not rest the power cable on the appliance.
- Always use the heater in a vertical position only.
- Do not obstruct the hot air outlet grilles or the air intake grille at the top or the bottom of the appliance.
- If the power cable is damaged, it must be replaced by the manufacturer or an authorised service centre in order to eliminate all risk.
- The appliance is not intended for use by persons (including children) with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, unless they have been given supervision or instruction concerning use of the appliance by a person responsible for their safety. Children should be supervised to ensure that they do not play with the appliance.
- Do not use this appliance in rooms measuring less than 4m². You should avoid positioning it in currents of air which could disturb operation of the heater.
- The heater must be positioned 50cm from furniture or other objects.
- As with any electrical appliance, whilst the instructions aim to cover as many eventualities as possible, caution and common sense should be applied when operating your appliance, particularly in the vicinity of young children.
- This appliance is intended only for a domestic use.
A safety device trips and turns the appliance off in the event of overheating or if it is placed in strong currents of air. To reset, unplug the appliance from the mains socket and leave to cool down (about five minutes), remove the cause of overheating, plug back into the mains and turn on again.
A number of models are fitted with a special device which turns power off if the appliance is tipped over, sloped or knocked. If this occurs, you will hear a beep.

WARNING: In order to avoid overheating, never under any circumstances cover the appliance during operation.

CAUTION: In order to avoid a hazard due to inadvertent resetting of the thermal cutout, this appliance must not be supplied through an external switching device, such as an external timer, or connected to a circuit that is regularly switched on and off by the utility.

Important information for correct disposal of the product in accordance with EC Directive 2002/96/EC.

At the end of its working life, the product must not be disposed of as urban waste. It must be taken to a special local authority differentiated waste collection centre or to a dealer providing this service. Disposing of a household appliance separately avoids possible negative consequences for the environment and health deriving from inappropriate disposal and enables the constituent materials to be recovered to obtain significant savings in energy and resources. As a reminder of the need to dispose of household appliances separately, the product is marked with a crossed-out wheeled dustbin.

Electrical connection (U.K. only)

- A) If your appliance comes fitted with a plug, it will incorporate a 13 Amp fuse. If it does not fit your socket, the plug should be cut off from the mains lead and an appropriate plug fitted, as below.
WARNING: Very carefully dispose of the cut off plug after removing the fuse: do not insert in a 13 Amp socket elsewhere in the house as this could cause a shock hazard. With alternative plugs not incorporating a fuse, the circuit must be protected by a 15 Amp fuse. If the plug is a moulded-on type, the fuse cover must be re-fitted when changing the fuse using a 13 Amp Asta approved fuse to BS 1362. In the event of losing the fuse cover, the plug must NOT be used until a replacement fuse cover can be obtained from your nearest electrical dealer. The colour of the correct replacement fuse cover is that as marked on the base of the plug.
- B) If your appliance is not fitted with a plug, please follow the instructions provided below.

IMPORTANT

The wires in the mains lead are coloured in accordance with the following code:

Blue:	Neutral
Brown:	Live

As the colours of the wires in the mains lead may not correspond with the coloured markings identifying the terminals in your plug, proceed as follows:

The blue wire must be connected to the terminal marked with the letter N or coloured black.

The brown wire must be connected to the terminal marked with the letter L or coloured red.

If you have a 3-pins plug, do not connect any wire to the "earth" terminal.

Dear Customer – The plug on this appliance will get 'warm' during use, this is perfectly normal. This product is A HIGH POWER HEATING APPLIANCE designed to our usual high standards but please make sure your wall sockets are in good condition and the plug is inserted correctly to avoid any accidental overheating. We suggest that you check the plug AND THE SOCKET regularly if the heater is in prolonged use, if you are in any doubt please consult an electrician.

WALL MOUNTING INSTALLATION

The appliance may be either portable or wall-mounted (if supplied with a bracket). Models with motorised base cannot be wall mounted. To mount on the wall, proceed as follows:

- Fix the bracket to the wall respecting the minimum measurements indicated (fig. 1).
- Attach the appliance to the top hook of the bracket, then rotate gently until it hooks to the bottom tooth of the bracket (fig. 2).
- The appliance must not be placed immediately under a fixed power socket.

Note: If you do not intend to wall mount the appliance, do not attach the bracket to the unit.

FUNCTIONING AND USE

Models with function selector and thermostat.

Make sure the appliance is off before plugging into the mains.

1. Plug the appliance into the mains. The light comes on. If your appliance has a timer, see the section "Models with 24 hour timer". However, to operate the appliance without programming, move all the teeth of the timer to the outside.
2. Turn the thermostat dial to maximum.
3. **Summer mode (fan only):** turn the function selector to the  position.
4. **Low power operation:** turn the function selector to position **1** (in models with two fan speeds, the fan operates at minimum).
5. **Medium power operation:** turn the function selector to position **2** (in models with two fan speeds, the fan operates at maximum).
6. **High power operation:** turn the function selector to position **3** (the fan operates at maximum).
7. **Switching off:** turn the function selector to the "**0**" position.
Note: In models with two power levels, position **2** corresponds to maximum power.

Setting the thermostat:

Turn the thermostat to maximum. When the room has reached the required temperature, turn the thermostat dial slowly anticlockwise until you hear a click and the fan goes off.

The thermostat will then keep room temperature at the selected level automatically.

FROST PREVENTION MODE

With the function selector in position 3 and the thermostat dial in position *, the appliance maintains room temperature at about 5°C, preventing freezing with minimal energy consumption.

Models with thermostat only

To switch the appliance on turn the thermostat dial to maximum. To switch the appliance off completely, turn the dial to the minimum position, then unplug from the mains.

MODELS WITH 24 HOUR TIMER

After setting the thermostat and function selector to the required position, to programme heating, proceed as follows:

- Turn the timer disk clockwise until the arrow on the timer ▲ lines up with the number corresponding to the current time.
- Set the times when you want the appliance to operate by pushing the teeth towards the outside. Each tooth corresponds to 30 minutes.

The radiator will now function automatically each day at the times set.

Note: To use the appliance without programming, push all the teeth outwards.

EXAMPLE

MODELS WITH SWIVELLING BASE AND ON/OFF pedal switch

Certain models have a swivelling base and ON/OFF pedal switch. The appliance can be manually oriented to an angle of 30° to the right or left to direct the air flow in the preferred direction.

To turn the appliance on, set the thermostat dial and function selector (and possibly also the timer) as described above, then press the pedal on the base.

To turn the appliance off, just press the pedal again.

Important: The appliance will come on only if you press the pedal.

MODELS WITH MOTORISED ROTATING BASE

Certain models have a motorised rotating base.

To distribute the air flow over a larger area, press the pedal. The appliance swings from right to left. To stop the appliance in the desired position, simply press the pedal again.

Models with motorised base are fitted with a tip-over switch which turns the appliance off if it falls over. To restart the appliance, simply place it upright again.

CLEANING & MAINTENANCE

- Always unplug from the mains socket before cleaning.
- Clean the air intake and outlet grilles regularly.
- Do not use abrasive products or solvents to clean the appliance.
