# SOME NOTIONS ON HUMIDITY

Air always contains a certain amount of water in the form of vapour. This determines the level of humidity in an atmosphere.

The capacity of the air to hold water vapour increases with temperature.

This is why in our homes, as soon as the temperature decreases, the vapour contained in the air condenses, as is evident on the colder surfaces in the room, such as the windows, walls etc.

The purpose of a dehumidifier is to remove the excess moisture from the air, avoiding the damage caused by condensation.

Experts have established that the optimum environmental conditions for our well being and for the home are obtained between 40% and 60% relative humidity. With very low temperatures, you are recommended to heat the room even minimally.

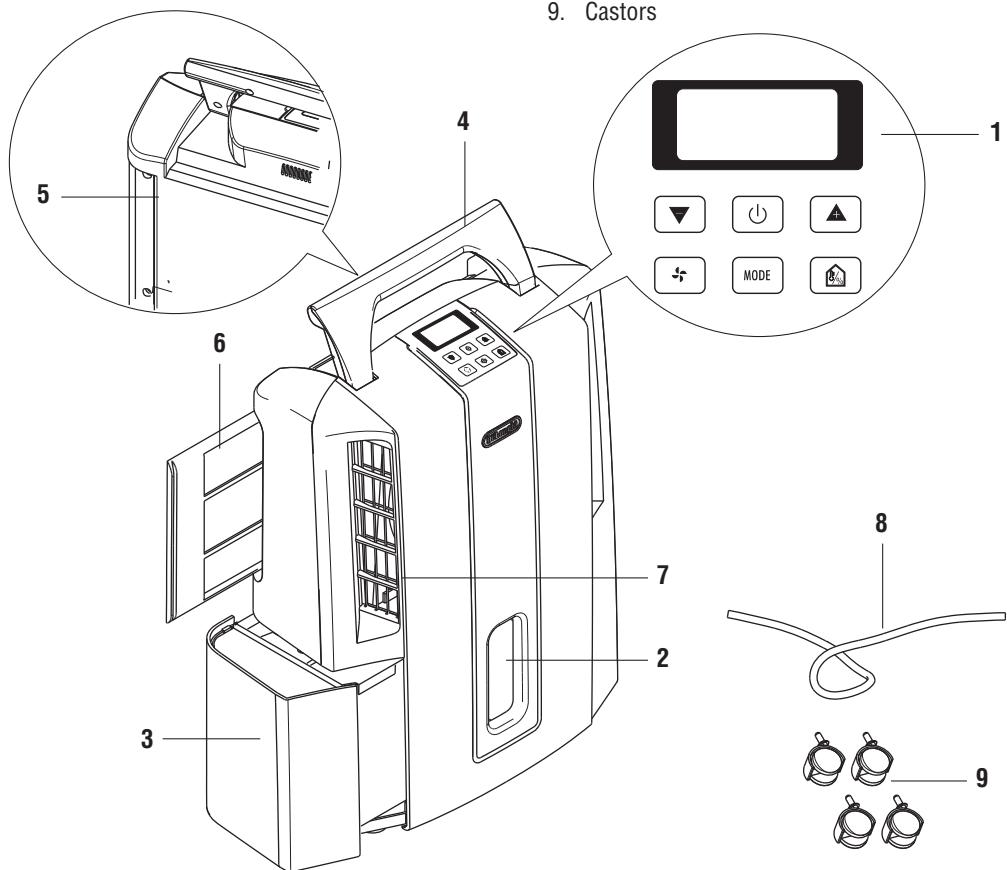

This considerably increases the dehumidifying power of the appliance.

With heating, the condensation formed by the water vapour on windows and other cold surfaces evaporates into the air to be collected by the dehumidifier. Air leaving the dehumidifier is usually about 1°C warmer than room temperature.

# INSTALLATION

Position the appliance in the room to be dehumidified. A free space of at least 50 cm must be left at the front of the dehumidifier, so as not to block the air outlet.

For efficient ventilation a space of about 5-10 cm should be left at the back of the appliance.

The condensate can be drained in one of the following ways:

## A) Draining into the tank

The condensate can be drained directly into the tank. The tank can be easily removed (fig.1).

fig. 1

## B) Continuous external draining

If the appliance is to be operated for long periods but you are unable to empty the tank regularly, you are recommended to use the continuous drain facility.

- 1) Remove the continuous drain cap by turning it anticlockwise then remove the rubber bung from the spout (fig. 2).
- 2) Fasten the rubber hose to the spout.

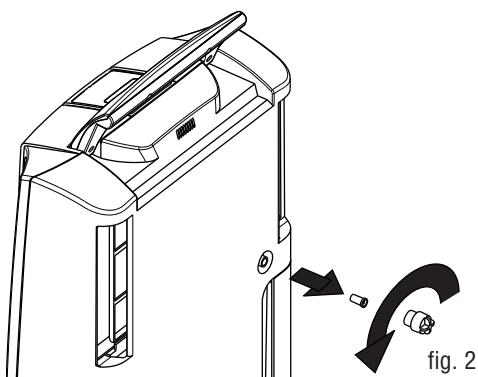

fig. 2

- 3) Make sure the end of the hose is no higher than the spout or water could remain in the tank. Make sure there are no kinks in the hose (Fig. 3).

**i** **Nota Bene:** Keep the rubber bung to close the spout.

# HOW TO DEHUMIDIFY

## Description of buttons

### "ON/Standby" button

ON/Standby" button

### "MODE" button

Selects the operating modes: dehumidifying, dry, smart and fan

### "Fan" button

Selects fan speed

### Hygrometer/thermometer button

Temporarily displays the temperature and humidity measured in the room by the appliance.  
N.B.: the measurements displayed are indicative only.

### Humidity increase/decrease buttons

Adjusts the percentage of humidity present in the room, increasing it or reducing it by steps of 5%.

### Display

Meaning of the codes or symbols which may be displayed:

**--** Indicates that the appliance is in standby mode.

**F E** Indicates that the tank is full, absent or positioned incorrectly.

**\*** Indicates that the appliance is operating at low temperatures. In this situation, ventilation cycles are alternated with dehumidification cycles to avoid the formation of ice. For use in particularly cold environments, you are recommended to heat the room to raise the ambient temperature even minimally. This allows the dehumidifier to operate in conditions that improve its performance and accelerate the dehumidifying process.

**P F** Indicates that there may be a fault with the probes, or that the humidity in the room is too low to be measured.

## MODE SELECTION

- 1) Plug the appliance into a mains socket.
- 2) " - " is displayed to indicate that the appliance is in standby and therefore ready for operation.  
If  is displayed, empty the tank or position it correctly.
- 3) Press the ON/Standby  button.

### Dehumidifying mode

Press the "MODE" button and choose dehumidifying mode.

"" and the level of relative humidity previously set are displayed.

Press the "+" or "-" button to set the desired humidity (30% means a dry environment, 80% a humid environment).

Press the "" button to modify fan speed (MIN/MAX).

When MAX speed is selected, the appliance operates at maximum dehumidifying power.

When MIN speed is selected, the appliance operates at low power and the noise will also be less.

Press the  button to display room temperature ("" symbol) and the relative humidity (" %") in the room in sequence.

When the appliance reaches the set level of humidity it will stop and the fan will come on at regular intervals to maintain a correct relative humidity reading.

As soon as the humidity increases above the set point, the appliance will automatically resume dehumidification operation.

### Dry mode

In Dry mode, the appliance operates constantly at maximum power.

This mode is useful to dehumidify the room rapidly.

Press the MODE button and choose Dry mode ( symbol on).

Relative humidity and fan speed cannot be set.

### Smart mode

This dehumidifies automatically.

According to room conditions, the appliance automatically establishes the optimum settings for maximum comfort.

Press the MODE button and choose Smart mode. The "" symbol appears on the display.

Relative humidity and fan speed cannot be set.

### Fan mode

Press the "MODE" button and choose fan mode (" is displayed).

Press the "" button to select the required fan speed (MIN/MAX).

# CLEANING AND MAINTENANCE

Always unplug the appliance from the power socket before performing any cleaning or maintenance operations.

For safety reasons, never wash the dehumidifier using a jet of water.

## Cleaning the cabinet

- Clean the appliance using a damp cloth then dry with a dry cloth.
- Do not use petrol, alcohol or solvents to clean the appliance.
- Do not spray liquid insecticide or similar products as they may deform the plastic.

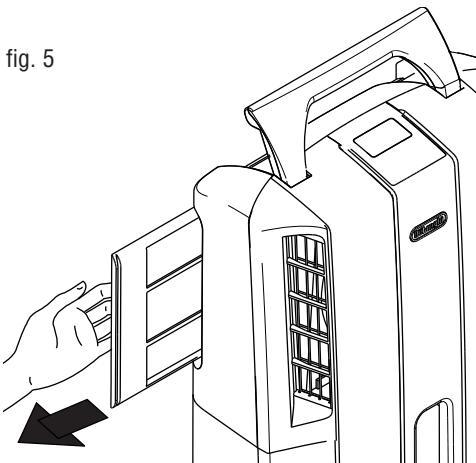

## Cleaning the silver ion air filter

If the filter is dirty, air circulation is compromised and the efficiency of the dehumidifying and air purifying functions decreases.

It is therefore good practice to clean the filter at regular intervals. The frequency depends on the duration and conditions of operation.

If the unit is used constantly or systematically, you are recommended to clean the filter once a week.

fig. 5

## If the appliance is not used for long periods

- After unplugging the appliance from the power socket, empty the tank.
- Clean and reposition the filter.
- Cover the appliance with a plastic bag to protect it from dust.

## Important information for correct disposal of the product in accordance with EC Directive 2002/96/EC.

At the end of its working life, the product must not be disposed of as urban waste. It must be taken to a special local authority differentiated waste collection centre or to a dealer providing this service.

Disposing of a household appliance separately avoids possible negative consequences for the environment and health deriving from inappropriate disposal and enables the constituent materials to be recovered to obtain significant savings in energy and resources. As a reminder of the need to dispose of household appliances separately, the product is marked with a crossed-out wheeled dustbin.

## 關於濕度

空氣中總含有一些水氣。大氣濕度表示空氣中的水氣含量。

空氣溫度越高，就能容納越多水氣。

因此當家中溫度下降，水氣就會凝結。房間中較冷的表面，例如窗戶、牆壁等，都會凝結水點。

抽濕機可去除空氣中過多的水氣，避免水點凝結，損壞物品。

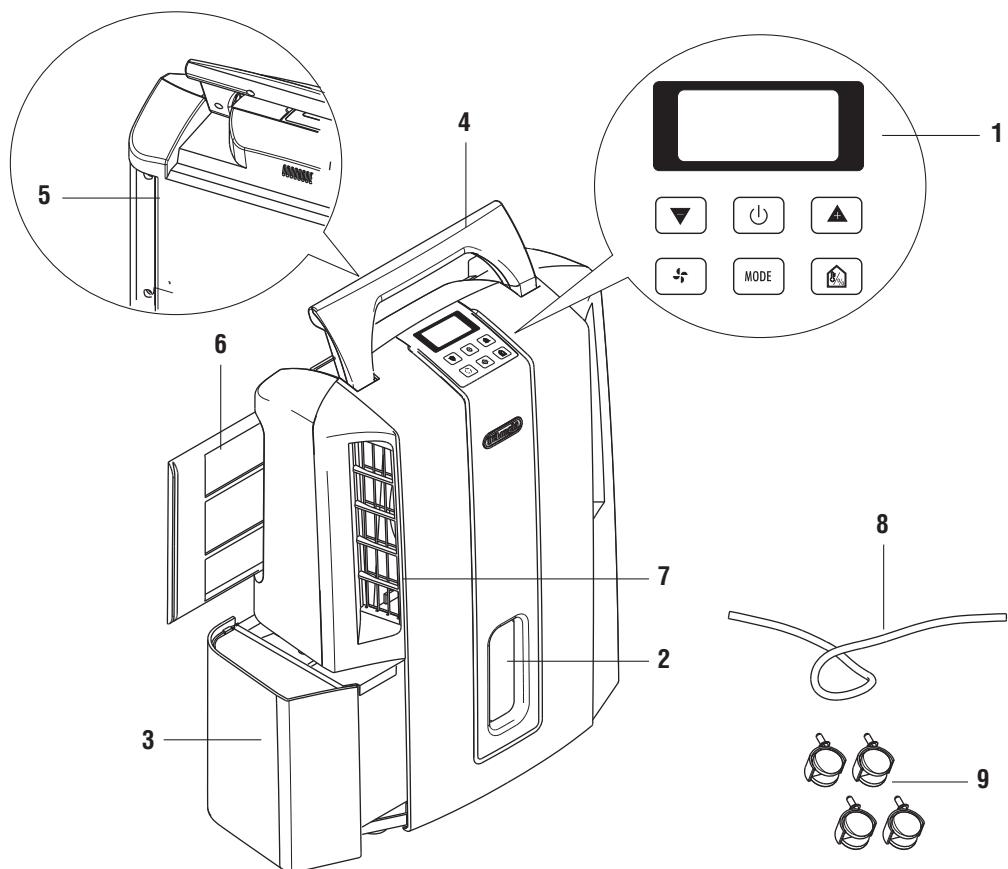

專家認為，相對濕度介乎40至60%是對我們身體及家居最好的環境。當溫度非常低時，我們建議您嘗試稍微提高室溫。

這樣做可大幅提高產品的抽濕效能。

當溫度升高，窗戶或其他低溫表面上凝結的水點會揮發於空氣中，抽濕機便能收集水氣。抽濕機排出的空氣，通常比室溫高1°C
